1 Equations

The sum of $1 + 2 = 3$ is valid. Consider equation:

$$a + b = c; \tag{1}$$

To square a number:

$$n^2 \tag{2}$$

Powers of n:

$$n^{(a+b)} \tag{3}$$

$$n_2 \tag{4}$$

$$\frac{(a+b)^2}{log_{(c+d)}98} \tag{5}$$

$$\frac{a}{\frac{1}{b} + c} \tag{6}$$

$$\sqrt[2]{\frac{3}{2}} \tag{7}$$

$$\sum_{x=1}^{5} \frac{x}{7} \tag{8}$$

$$\int_a^b (3x)dx \tag{9}$$

$$\alpha + \beta \tag{10}$$
